## Red wine

Grapes fermented with their skins. Tannin and acid are preservatives, which is why an unopened bottle keeps for years and an open one does not last the week.

### How long it keeps

Unopened, this keeps **5 years** — which is what puts it on [the long shelf](#).

| As sold | Unopened, in the cupboard | Once opened             |
|---------|---------------------------|-------------------------|
| as sold | 3–5 years                 | 1–3 days — refrigerated |

Counted from the date on the package. Figures are the **USDA FSIS FoodKeeper** table's, for unopened storage at room temperature; FoodKeeper counts a month as 30 days.

FoodKeeper's own note: *Dark, away from direct heat or sunlight.*

The table was not pulled from USDA — fsis.usda.gov answers 403 to non-browser clients from this machine — so it came from a mirror of the data.gov dataset and its vintage is unverified. Treat a single figure as indicative, not as a use-by date.
