#byproduct #cannabis

1. **Kief:** Simply collect the trichomes that fall off your [Cannabis](#) buds. You can use a grinder with a kief catcher.
2. **Dry Sift:** Use a series of fine mesh screens to separate the trichomes from the plant material.
3. **Dry Ice Hash:** Shake cannabis with dry ice in a mesh bag to separate the trichomes.
4. **Bubble Hash:** Use ice water and bubble bags to extract trichomes.
5. **Rosin:** Press cannabis buds or hash between parchment paper using a hair straightener or a rosin press.
6. **Tinctures:** Soak cannabis in high-proof alcohol to extract cannabinoids.

# Distillates

1. **Short Path Distillation:** This method involves heating the cannabis extract to evaporate and then condense the cannabinoids. It's a bit more complex and requires specialized equipment like a short path distillation kit<sup>12</sup>.

**wax**

**BHO**

**Shatter**

**Distillate**

**Hash**

**pressed**

**bubble hash**

**Crystalline**

**Rosin**

**Live Resin**

**Badder, batter, budder**

**crumble**
