| Levels of Relative Humidity | ### Effects of Humidity on Cannabis Seeds                                       |
|-----------------------------|---------------------------------------------------------------------------------|
| 80 - 100 %                  | Seeds germinate.                                                                |
| 40 - 60 %                   | Seeds increase respiration and seed storage fungi become a significant problem. |
| 20 - 30 %                   | Short-term storage.                                                             |
| 18 - 20 %                   | Medium-term storage.                                                            |
| 12 - 14 %                   | Long-term storage.                                                              |
| 8 - 9%                      | Shorter longevity than seeds stored at a slightly higher humidity.              |

Yes, [cannabis seeds](#) can be stored in the freezer. The lower the temperature, the slower they decline. However, it's usually not necessary to freeze your seeds.
