poles

Hazel: Mentioned as one of the definite choices for coppicing, typically on a seven-year cycle- .

- Sweet Chestnut: Also noted as a good coppice wood, especially in England, though it may not perform as well in some other regions
- .

- Ash: Considered one of the desirable firewood species that coppices relatively easily
- .
- Maple: Another species that coppices well and is valued for firewood
- .
- Beech: Listed among the desirable firewood species that coppice relatively easily
- .
- Birch: Also mentioned as a good species for coppicing and firewood production
- .
- Oak: Particularly chestnut oak is noted as good for coppicing
- .
- Cherry: Included in the list of desirable firewood species that coppice well
- .
- Hophornbeam: Another species mentioned as suitable for coppicing and firewood
- .
- Sycamore: While not specifically mentioned for ease of coppicing, it's noted as a common tree in some areas and could be considered .# topics

species

LatinName	CommonName	Hardiness	USDA	EdibilityRating	MedicinalRating	OtherUsesRating	Caragana
microphylla	Littleleaf Peashrub	4-9	0 0 3	Indigofera tinctoria	Indigo, True Indigo, dye	indigo	5-12 2 2 4
Populus hybrids	Hybrid poplar	2-10	3 3 4	Salix hybrids	Hybrid willows		2-11 3 3 5
